# INTERACTIVE VIDEO METHOD OF TEACHING AND ASSESSMENT

Karen Clark-Burg, Annie Das and Prof Selma Allix

## BACKGROUND

School of Nursing was very keen to trial a method of teaching and assessment in one of the Nursing skills units.

Students were divided into two groups to experience both traditional and interactive video methods using a commercially available software program in a cross-over research. It was expected that this strategy would enhance students 'deeper learning' and better standards of skills.

[www.videointeractlearn.edu.au](http://www.videointeractlearn.edu.au)

## FINDINGS

- › Students found the assessment process less onerous
- › Capacity to review process and validate assessment mark
- › Level of competency and confidence increased
- › Reduced assessment bias
- › Overall improvement in performance of the skill
- › Videoing is a useful feedback tool
- › Reduced staffing budget

## LIMITATIONS

Software Incompatibility Issues with computers

- › Increase in student workload

Assessment Day Issues

- › Students inexperience in operating camera
- › Noise control

Post Assessment Issues

- › More streamlining of process was required.

**To overcome these limitations a new project is being planned**

## FUTURE DIRECTIONS

- › A simple web-based program has now been developed ([www.videointeractlearn.com/critique](http://www.videointeractlearn.com/critique) beta)
  - › Showcase innovations in the School of Nursing
  - › Use by other Schools in the University
  - › Use on other campuses
  - › Endorsement by professional bodies
  - › Expand across other professions
